

Website Strategy & Full Copy

TOTEC × BlackPrint | 2026

This document contains the complete website architecture, homepage copy, supporting pages strategy, demo booking flow, visual direction, and conversion rationale for BlackPrint's primary web presence.

Audience: sophisticated CRE professionals — expansion managers, fund analysts, franchise operators, and strategy leads. The website must earn trust before it earns a meeting.

Navigation logic: the demo CTA is always visible. Every page has one job. No page should require more than 90 seconds to process.

Section-by-Section Structure

Reading time per section is estimated for a mid-level expansion manager encountering BlackPrint for the first time. Total scroll-to-demo: under 3 minutes.

Section 1 — Hero (0–15 seconds)

Purpose: immediate qualification. The visitor must recognize themselves and their problem within 10 seconds.

Contains: headline, subheadline, two CTAs, one strong visual.

Visual: dark-background map visualization showing a retail network across a Mexican metro — pins, corridors, heat zones. No UI dump. Feels like live intelligence.

Section 2 — Problem Reframe (15–35 seconds)

Purpose: validate the visitor's actual pain point without discrediting their current process.

Contains: 3 structured problem statements. Short. No accusation. Pure recognition.

Ends with a bridge line that positions BlackPrint as complementary to expertise, not a replacement for it.

Section 3 — The Gap (35–50 seconds)

Purpose: explain why the problem persists despite data being available. Name the structural issue: fragmentation.

Contains: one clear diagnostic paragraph + a visual metaphor (scattered data vs. unified system).

Section 4 — The System (50–75 seconds)

Purpose: show what BlackPrint actually is — not a feature list, but an analytical system.

Contains: 3-step workflow (Define → Analyze → Decide), brief feature callouts, platform visual.

Section 5 — Use Cases / ICP Self-Selection (75–100 seconds)

Purpose: allow visitors to self-identify and receive tailored messaging.

Contains: 4–5 role-based cards. Each card answers: what decision am I making, what does BlackPrint show me, what outcome do I get.

Section 6 — Outcomes (100–120 seconds)

Purpose: translate product logic into business language. Metrics, not features.

Contains: 3 outcome statements with supporting logic. Optional: a light proof point or anonymized stat.

Section 7 — Credibility Layer (120–140 seconds)

Purpose: establish legitimacy for a market-stage company.

Contains: data depth callout (150+ datasets), regional specificity (Mexico / LATAM), client logos or anonymized proof, institutional comparisons (Bloomberg → real estate).

Section 8 — Final CTA (140–160 seconds)

Purpose: convert. Low friction. No pressure.

Contains: calm invitation to book a 30-minute evaluation walkthrough. No sales language. No urgency manipulation.

Navigation Bar

* **BLACKPRINT** Platform Use Cases Data Company [**Book a Demo**]

The demo CTA in the navigation is a contained button — not a link, not inline text. It must persist on scroll. Desktop and mobile.

Section 1 — Hero

HERO HEADLINE

Where every expansion decision is built on structure.

SUBHEADLINE

BlackPrint is the location intelligence platform for commercial real estate teams in Latin America. It structures 150+ datasets into a single analytical system — so decisions are made on evidence, not instinct.

PRIMARY CTA

Book a Demo

SECONDARY CTA

See how it works →

VISUAL DIRECTION

Dark canvas. A Mexican metro (CDMX or Monterrey) rendered in BlackPrint's color system. Multiple retailer pins visible — some clustered, some isolated. A trade area radius drawn around one pin. Subtle data layers visible underneath: traffic intensity in amber-to-red, demographic segmentation in muted tones. No toolbar. No cursor. Just the map as intelligence artifact.

Section 2 — Problem Reframe

SECTION LABEL

The Problem

SECTION HEADLINE

Expansion decisions don't fail from lack of experience. They fail from lack of structure.

THREE PAIN POINTS — DISPLAY AS HORIZONTAL CARDS OR STACKED MODULES

01 — Site selection based on incomplete context

Most location decisions rely on visible signals: foot traffic, nearby stores, broker input. But the factors that determine whether a store outperforms or underperforms are rarely visible on the surface. Competitor saturation, mobility patterns, demographic alignment, zoning restrictions — these require structured data, not observation.

02 — Analysis done once, not continuously

Markets shift. A location evaluated six months ago is not the same location today. Most teams conduct point-in-time analysis, then act on conclusions that have already aged. A structured intelligence system keeps analysis current as conditions change.

03 — Data spread across disconnected sources

Demographics from one vendor. Traffic from another. Zoning from a government portal. Listings from a broker. Competitive density from a spreadsheet someone built manually. No single person, no matter how experienced, can synthesize this accurately at speed.

BRIDGE LINE

BlackPrint doesn't replace market experience. It gives that experience a structural foundation.

Section 3 — The Gap

SECTION LABEL

Why It Persists

SECTION HEADLINE

The data exists. The problem is fragmentation.

BODY COPY

Latin American CRE teams are not operating without data. They are operating with too many data sources, none of which speak to each other.

Demographics live in one system. Mobility in another. Zoning in a government portal that was last updated two years ago. Competitive intelligence in a spreadsheet someone built manually.

The result is not a data problem. It is a synthesis problem.

Teams cannot evaluate, compare, and validate decisions at the speed and consistency that modern expansion requires — not because they lack expertise, but because no single system gives them a unified view.

CLOSING LINE

BlackPrint is built to solve exactly this. Not by adding more data. By structuring it.

Section 4 — The System

SECTION LABEL

How BlackPrint Works

SECTION HEADLINE

150+ datasets. One analytical system. From question to decision.

THREE-STEP WORKFLOW

01 — Define

Choose a city. Select a territory. Search any address. BlackPrint gives you a precise geographic canvas — from a single parcel to an entire metropolitan corridor. Set capture areas by radius, walk time, or drive time. Stack multiple locations side by side.

02 — Analyze

Layer real data across your selected area. Mobility and traffic patterns. Demographic density and income segmentation. Zoning classifications and cadastral boundaries. Competitive

presence: brands, categories, ratings, opening dates. On-market and off-market commercial listings. 150+ structured datasets — in seconds, not days.

03 — Decide

Score and rank your opportunities. Compare locations objectively. Build a shared portfolio your team can evaluate together. Export analysis-ready reports for internal validation or executive review. Move from scattered data to aligned strategy — without changing your process, just structuring it.

SYSTEM CALLOUT BOX

Data → Decision → Strategy

This is not a mapping tool. It is the operating system for real estate decision-making.

Section 5 — Use Cases / ICP Self-Selection

SECTION LABEL

Built For

SECTION HEADLINE

Different decisions. The same need for clarity.

INSTRUCTION NOTE

These appear as selectable cards. When clicked, copy below expands or visitor is routed to the role-specific page. Demo CTA appears at the bottom of each card.

Card 1 — Retail Expansion Teams

The decision you are making:

Where to open next. Which market. Which specific location within that market. How a new site affects existing stores.

What BlackPrint shows you:

Real competitive density. Trade area demographics that match your concept. Traffic patterns by time and mode. On and off-market listings in a single view.

The outcome:

Fewer bad decisions. Faster site evaluation. Internal validation you can defend to leadership.

Card 2 — QSR & Franchise Operators

The decision you are making:

Which territories to enter. How to sequence expansion. Where saturation risk is building across your existing network.

What BlackPrint shows you:

City-wide market segmentation. Cannibalization modeling. Competitor format density by submarket.

The outcome:

Consistent criteria applied across regions. Expansion decisions that scale without scaling the error rate.

Card 3 — Developers

The decision you are making:

What to build, where, and for whom. Which retail mix will anchor a development. Where demand is structurally supported.

What BlackPrint shows you:

Zoning and land use context. Demand signals by category. Competitive supply gaps in target corridors.

The outcome:

Development decisions grounded in market reality, not broker intuition.

Card 4 — Investment Funds

The decision you are making:

Whether a location or portfolio asset is structurally sound. What the risk profile of a site looks like over a 5–10 year horizon.

What BlackPrint shows you:

Market context. Demand trends. Competitive dynamics. Regulatory constraints. All in one view, faster than any traditional due diligence process.

The outcome:

Capital deployed with structured, auditable rationale.

Card 5 — Brokerage Firms

The decision you are making:

How to advise clients with greater precision. How to identify opportunities before they reach the market.

What BlackPrint shows you:

Off-market opportunity signals. Comparative site analysis. Market context that elevates your advisory position.

The outcome:

More credible recommendations. Faster client decisions. Higher deal velocity.

Section 6 — Outcomes

SECTION LABEL

What Changes

SECTION HEADLINE

BlackPrint doesn't promise perfect decisions. It gives every decision a structure it didn't have before.

THREE OUTCOME BLOCKS

Outcome 1 — Fewer bad locations

The cost of a failed store goes beyond rent. Relocation, brand damage, capital written off, and time lost. BlackPrint surfaces the structural risk factors — cannibalization, demographic misalignment, competitive saturation — before a decision is made, not after.

Outcome 2 — Decisions you can defend internally

In most organizations, a real estate recommendation is only as strong as the evidence behind it. BlackPrint produces structured, exportable analysis that allows expansion managers to bring data into executive conversations — not just instinct.

Outcome 3 — Expansion that scales consistently

As brands grow, the informal processes that worked at 10 locations break down at 50. BlackPrint standardizes how markets are evaluated, how sites are compared, and how decisions are recorded — so expansion quality holds as the pace accelerates.

Section 7 — Credibility Layer

SECTION LABEL

Why BlackPrint

SECTION HEADLINE

Built for Latin America. Not adapted from somewhere else.

CREDIBILITY PILLARS — 3 COLUMNS OR STACKED BLOCKS

Pillar 1 — Depth of Data

150+ structured datasets. Demographics, mobility, zoning, cadastral records, points of interest, on-market and off-market listings — all built for the Mexican and Latin American commercial real estate context.

Not repurposed from a US or European platform. Structured for the markets where decisions are actually being made.

Pillar 2 — Institutional Methodology

BlackPrint's analytical framework was designed with one principle: decisions improve when data is structured. This is not a new idea. Bloomberg applied it to capital markets. BlackRock's Aladdin applied it to institutional risk. BlackPrint applies it to commercial real estate in LATAM.

The methodology is the same. The market is underserved.

Pillar 3 — Built Inside the Market

BlackPrint operates from within the markets it analyzes. Our team understands how real estate decisions are made in Mexico — the role of local relationships, the informality of data, and the pace at which markets move. We built for that reality.

LOGO ROW

[Client logos or partner marks — anonymized or authorized. Minimum 3. No household names required; regional credibility matters more than brand recognition at this stage.]

INSTITUTIONAL COMPARISON CALLOUT

"The most powerful technologies don't create noise. They become infrastructure."

— Gilberto Perezalonso, Co-founder, BlackPrint

Section 8 — Final CTA

SECTION LABEL

Next Step

SECTION HEADLINE

Evaluate your next expansion with structure.

Book a 30-minute walkthrough. We will show you how your current expansion pipeline looks on BlackPrint — and what it reveals that isn't visible yet.

No commitment. No pitch. Structured analysis from the first conversation.

PRIMARY CTA BUTTON

Book a Demo →

SECONDARY LINE BELOW BUTTON

30 minutes. Focused on your markets. No generic demo script.

Additional Pages

/platform — Platform Deep Dive

Audience: visitors who clicked 'See how it works' from the hero or mid-page secondary CTA. They want depth before booking.

Structure: expanded 3-step workflow with feature-level detail. Screenshot or screen recording embedded. Dataset depth section (150+ sources, categorized). Export and sharing capabilities. Short FAQ addressing the most common hesitations (data coverage, onboarding time, pricing entry point).

Bottom CTA: Book a walkthrough — same frame as homepage.

/use-cases/[role] — ICP-Specific Pages

One page per segment: Retail, QSR, Developers, Funds, Brokers.

Structure: role-specific headline. The decisions this team makes. What BlackPrint surfaces for them specifically. One detailed scenario (what they evaluated, how BlackPrint was used, what the decision became). Outcome metrics. Demo CTA.

These pages serve two functions: conversion for inbound visitors who self-select, and sales enablement material Gil can share post-discovery call.

/data — Data Depth Page

Audience: technical buyers or analysts who need to validate coverage before internal approval.

Structure: dataset categories listed (demographics, mobility, zoning, cadastral, listings, POIs, scoring). Coverage notes by city/region. Data freshness and update cadence. Brief methodology note. No raw data exposed — this is a credibility page, not a documentation page.

CTA: Request full data specification (lead capture) or Book a Demo.

/company — Company Page

Audience: anyone due-diligencing BlackPrint before a purchase recommendation.

Structure: brief company narrative (San Francisco → CDMX → Querétaro — intellectual honesty about the path). Gil and founding team. Mission statement grounded in the Bloomberg/Aladdin analogy. Investors, accelerators, or program associations. Contact information.

Tone: institutional autobiography, not startup pitch.

/insights — Analytical Content

Audience: top-of-funnel CRE professionals discovering BlackPrint through LinkedIn or search.

Structure: article-format content. Same voice as Gil's LinkedIn posts. Market analyses, expansion pattern breakdowns, LATAM CRE commentary. Each article ends with a light CTA to the platform or demo.

These are not blog posts. They are field notes from someone who operates at the intersection of data and real estate decisions.

/case-studies — Proof Layer

Audience: mid-funnel visitors who need to see the product work in their world.

Structure: 2–3 case studies minimum at launch. Format: decision they faced → data they lacked → how BlackPrint structured it → outcome. Keep short — 300 words maximum per case. Brand anonymized if required. City and category always named.

Design: before/after comparison visual where possible. Screenshot of the analysis view from BlackPrint.

Conversion & Demo Strategy

Booking Page Copy — /demo

HEADLINE

See your expansion markets through structured data.

SUBHEADLINE

Book a 30-minute session. We'll use your actual markets — not a generic demo. You'll leave with a clearer view of at least one expansion decision you're currently evaluating.

WHAT TO EXPECT — 3 LINES, NO HYPE

What the session covers:

- Your current expansion geography and the decisions you're working through
- A live walkthrough of BlackPrint using your specific markets
- Honest assessment of where structured data changes your current process

FORM FIELDS

Name | Company | Role / Title | Markets you're currently evaluating | [Book a time — embedded calendar]

Keep the form to five fields maximum. The 'markets you're evaluating' field pre-qualifies the call without feeling like interrogation.

BELOW FORM

No commitment required. The session is structured, focused, and built around your context — not a standard pitch.

Thank You Page — /demo/confirmed

HEADLINE

You're confirmed. Here's what happens next.

COPY

Your session is booked. A confirmation is on its way to your inbox.

Before the call, we'll review the markets you shared. Come prepared with one location decision you're working through — the session is most useful when it's grounded in something real.

SECONDARY ACTION

While you wait: review how BlackPrint structures expansion analysis → [link to /platform]

Demo Follow-Up Email — Send within 2 hours of booking

SUBJECT LINE

Your BlackPrint session — confirmed for [date]

EMAIL BODY

[Name],

Confirmed — we'll connect on [date] at [time].

To make the session as useful as possible: bring one location decision you're currently evaluating. It doesn't need to be fully formed. We'll use it as the basis for the walkthrough.

If anything changes before then, reply directly to this email.

— Gil

BlackPrint

Design Specifications

Color System

SET 1 — SHADES (CONTAINERS & TEXT)

Depth 9: #2F2F2F

Darkest container. Hero, final CTA blocks, section dividers.

Depth 8 / 7: #383838 / #484848

Deep and mid containers. Cards on dark sections.

Depth 6: #646669

Borders, rules, divider lines.

Depth 5: #8D9398

Secondary text: subtitles, notes, disclaimers.

Depth 3 / 1: #B7BCC0 / #D7DCE0

Lightest secondary text. Low-hierarchy text on dark.

On Primary: #FFFFFF | On Secondary: #231F20

Text on dark bg = full white. Text on light bg = #231F20. Never use #000000.

SET 2 — ACCENTS (KEY ELEMENTS)

Blue Primary: #0875E3

CTA buttons, primary interactive elements, active links.

Blue Highlight: #52BCF5

Hover states, section label accents, data callouts, tagline treatments.

Pink Primary: #FE2B7C

Secondary accent. High-priority callouts, key stats. Use sparingly.

Pink Highlight: #FF9E9E

Background tints for secondary callout boxes.

CONTRAST RULE

Text must be at least two depth levels from its container. Depth 7 container → text at Depth 5 or lighter. No exceptions.

Map & Magnitude Colors

These apply specifically to any marketing material showing BlackPrint platform data or visualizations.

Map labels use the dedicated map_set: turquoise #00BCD4, lavender #A8B0F2, purple #7E57C2, blue #6176F8, lime #C0CA33, green #43A047, yellow #FBC02D, orange #FF6F61, red #FF4F4F. Location pins and data graph labels draw from this set — not from the Shades or Accents sets.

Performance/magnitude gradients run from class_ab #67AC5C (best) through class_e #ED6337 (worst). Use this scale consistently in any scoring visualization, site comparison, or ranking graphic.

Typography

Headlines: Inter or similar geometric sans. **Weight:** 700. **No decorative fonts.**

Body: Inter Regular, 16–18px. **Line height** 1.65.

Labels / Eyebrows: Inter 500, 11–12px, letter-spacing 0.12em, all caps.

No script fonts. No serif except for a single pull quote context if needed. Readability over expression.

Imagery & Visual Language

Maps as primary visual asset.

Every map shown must look like real data — dark charcoal canvas (#2F2F2F), geo-accurate to Mexico. Use BlackPrint's actual platform visualization where possible. If not, commission custom renders: Depth 9 background, blue (#52BCF5 / #6176F8) and teal (#00BCD4) data layers, map_orange (#FF6F61) for heat/traffic intensity, clean pin markers from the map_set.

No stock photography of people.

No generic cityscapes. No smartphone screens. No handshakes. The visual language is analytical, not relational.

Data visualizations over icons.

Where iconography is needed, use simple geometric forms. Never decorative. Prefer a real chart over a flat icon of a chart.

Motion & Interaction

Minimal. Scroll-triggered fade-in for sections. No parallax. No auto-playing videos. If a platform demo video exists — autoplay muted, loop, embedded as background or in a contained player.

Map visualizations can animate gently — pins dropping, layers fading in. This signals the platform is live intelligence, not static imagery.

Reference Brands

Palantir (confidence without arrogance), Bloomberg (institutional weight), Anduril (dark UI done with authority), Placer.ai (maps as primary asset). Do not copy their design. Understand the feeling they produce in their audience: sophisticated, precise, necessary.

Why This Strategy Works

The Core Psychological Problem

BlackPrint operates in a category most prospects have never purchased before. They are not looking for BlackPrint. They are looking for fewer bad locations, faster decisions, and stronger internal justification for the choices they're already making.

The website's job is not to sell them on a new tool. It is to reframe what they are already doing as a process that could be structured — and show them that BlackPrint provides that structure.

Conversion Principle 1 — Recognition Before Proposition

The problem section comes before any feature description. This is deliberate. Prospects must first feel understood before they will accept any claim about value. A visitor who sees their actual problem described accurately — without accusation — becomes receptive. A visitor who sees features first becomes skeptical.

Conversion Principle 2 — Institutional Tone as Credibility Signal

The audience is not a startup founder looking for a life hack. They are experienced professionals who manage significant capital and make consequential decisions. The tone of this website signals that BlackPrint understands their context. Startup hype would disqualify BlackPrint instantly. Institutional language earns attention.

Conversion Principle 3 — The Demo as an Evaluation, Not a Sales Pitch

The word 'demo' is used intentionally, but framed as a professional evaluation. 'We'll use your actual markets' is the most important line in the booking flow. It removes the fear of a scripted pitch and replaces it with the expectation of a focused, relevant session.

This also pre-qualifies the lead. A prospect who submits their actual expansion markets has already begun the engagement process.

Conversion Principle 4 — Self-Selection Reduces Bad Demos

The ICP card section exists to serve two groups: visitors who immediately identify and self-convert, and visitors who are uncertain whether BlackPrint is relevant to them. The card structure resolves the second group without requiring a sales conversation. The right people book. The wrong people self-filter.

Conversion Principle 5 — Credibility Must Be Local

A generic SaaS credibility section (review stars, enterprise logos) will not move a Mexican CRE professional. What moves them is evidence that BlackPrint understands their specific market. Geographic specificity — CDMX, Monterrey, Querétaro, the Bajío — earns more trust than any

global brand association. Use real place names, real market data, real local context everywhere possible.

Expected Conversion Path for the Primary ICP

Lands on homepage via LinkedIn post or referral

Recognizes the problem in Section 2 (15–30 sec)

Understands the system in Section 4 (60–90 sec)

Selects their role in Section 5 (self-qualifies)

Books demo in Section 8 or persistent nav CTA (arrives educated, half-sold)

30-min session: structured, focused on their markets, no pitch → conversion
